

Laparoscopic Entry: A Hybrid Technique of Open Hasson and Direct Trocar Access

¹Sadashivayya S Soppimath, ²Chiniwalar Srishail, ³Praveen Padasali

ABSTRACT

The first trocar entry for creating pneumoperitoneum is a very crucial step in minimizing complications and completing the procedure laparoscopically. Various methods have been described, among which Veress and open Hasson technique are widely used. Here we describe a novel and hybrid technique of combining open Hasson and direct trocar with several advantages.

Keywords: Entry, Laparoscopy, Technique.
